

ASSIGNMENT - I.

In the rural areas, people are curious to use gadgets (phones, computer), but they are not aware about the risks of frauds going on without them knowing. Complaints raised are that they are getting messages from their particular banks about the spendings that they didn't do.

A website / application should be developed to detect the frauds & scams going on that will simultaneously provide information about steps that are necessary to do for security purpose. They can just raise their issue on the app & if required can also call a technician for help (on call / physically). Set a campaign in a small area & let them know about it & tell them to inform more people about the same.

1.7 Executive Summary Snapshot :-

Analysis : A project is to be launched for safety of rural area people as they are not known about the frauds going on.

Findings : Frauds & scams are found in the particular area. They are getting msgs from banks that their money is from their account.

Project Description : An app is to be proposed to keep people's money secure & to make them aware about the frauds & help them.

Scope : Everyone needs money & it's security. Every person in the village would attend the campaign & ask for safety. It would be very helpful for each & every person in the area.

NASH

Proposed Project: After understanding all their problems, we have decided to develop an app to help them with all they need; all the security & as well as ~~help~~ help. Information is to be provided about the scams & how to protect our data.

2.7 Project Description:-

Project purpose: Our purpose is to make people trust on the people that are trying to help them. Main purpose focuses on the safety of bank accounts & social media & private info released on social media.

Current Solution: Solution to safety is to develop an informative app which takes care about the safety measures to be taken. To provide help even by visiting them would be an effective way.

Challenges : • People would hesitate to tell their problems publically in a campaign in front of many people that they know.
• People wouldn't attend the campaign due to work or by simply taking it for granted.

Why to take the project? : People would not move ahead in the technical ~~to~~ would due to the scams going on. They would rather think to be in the same situation as they are right now. So to avoid this, if to make everyone contribute to make a better India, safety measures should be informed to everyone in the rural areas.

3> Project Scope:

Project specific goals :

- App development.
- Informing about scam
- Information about security.
- Providing help for secure accounts.
- Set campaigns for help.

Tasks : Our tasks are to set campaigns & make people visit them.
 People should tell all their tech technical problems to us.
 Our task is to provide security.

Deliverables :

- An app
- Security.
- Campaign.
- Info for safety
- One-to-one help.

COSTS :

Campaign \rightarrow 2000 - 3000.
App development \rightarrow 1000 - 1500.
Travel \rightarrow 2000 - 2600.

Deadlines : On the spot.
Everything would be sorted on
the spot if they can be
connected to the app forever
for any further updates.
